

## SUBJECT: Aqua Plus Water Heaters – Easy Initial Air Purge

The initial purging of air from a hydronic system piping can sometimes be challenging and time consuming. To assist contractors when installing our Aqua Plus indirect-fired water heaters, Weil-McLain developed the piping diagram below to ease the removal of air that may get trapped inside the water heater coil. This diagram will be included in the next version of our Aqua Plus Product Manual as another recommended method of piping our indirect-fired water heaters.

If you have any technical questions regarding this, or any other Weil-McLain product, please feel free to contact us at 1-800-526-6636 (7:00 a.m. – 4:00 p.m. CST), or at [wmtechnicalservices@weil-mclain.com](mailto:wmtechnicalservices@weil-mclain.com)
