

## IPEX System 1738® PVC Approved for Use with Select Weil-McLain Boilers

Weil-McLain continues to add more venting options to ease boiler installations. As contractors know, jobsite conditions and/or locations sometimes present venting challenges. Weil-McLain has now approved use of IPEX System 1738® PVC flue gas venting materials with the following residential gas boilers: Evergreen (Evergreen Pro), ECO Tec, Ultra, AquaBalance and the GV90+.

Our boiler manuals are in the process of being updated to include this latest addition. All venting requirements provided in the boiler manuals for PVC, and the System 1738 vent manufacturer literature, must be followed. If you have any technical questions regarding System 1738 PVC, please contact IPEX at 1-800-463-9572 or [system1738.com](http://system1738.com), or [ipexna.com](http://ipexna.com). For boiler related questions, please contact our Weil-McLain Technical Services Department at **1-800-654-2109 (option 2)**, or email [wmtechnicalservices@weil-mclain.com](mailto:wmtechnicalservices@weil-mclain.com)

Thank you for your continued support!
