

# Best of Both Worlds

Cast iron durability meets condensing efficiency  
for long-term energy savings

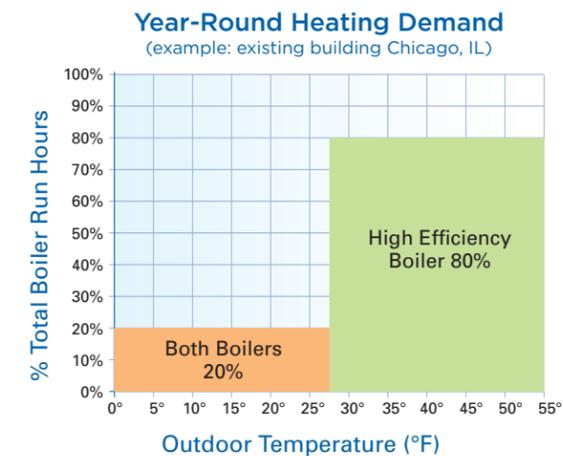

# Why waste energy?

## Optimize efficiency, longevity and ROI in existing buildings

In most regions, very few days out of the year require a commercial building's full boiler system capacity. That's often less than 3% of the year. And because traditional boiler plants typically supply higher water temperatures during the entire heating season, both efficiency and comfort suffer.

So how do you eliminate these load inefficiencies without replacing your existing heating system? Combine a durable, cast iron boiler with a high-efficiency condensing boiler from Weil-McLain. That way you can reduce wasted energy, lower utility costs and protect the environment while extending the life of an existing heating system.

## How our hybrid system works

### Condensing Boiler (Low-Load periods)

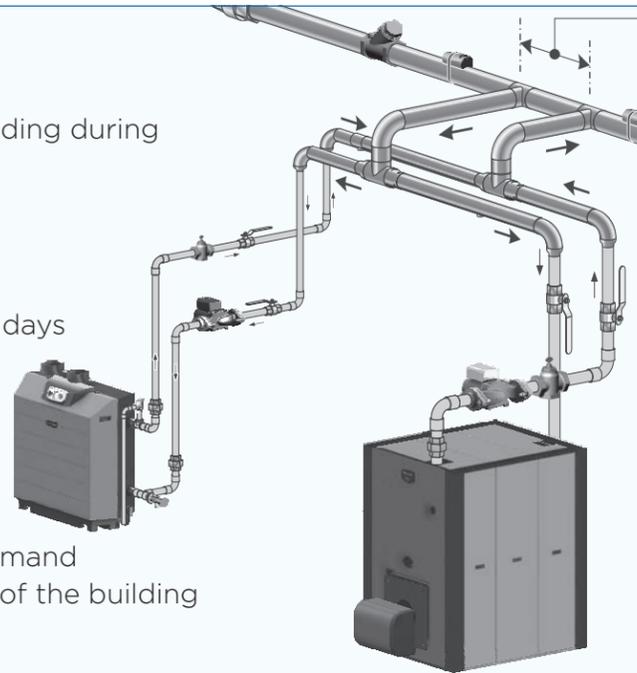

- First on boiler
- Best match for heating demand of the building during shoulder seasons and mild winter days
- Provides high efficiency heating and lower water temperatures

### Cast Iron Boiler (High-Load periods)

- Added heating capacity on coldest winter days
- Operates at hotter water temperatures during low outside air temperatures
- Longevity is retained

### Automatic Sequencing

- Controller automatically enables the cast iron boilers based on increased heating demand
- Correlates heating capacity to actual load of the building

# Make a lasting investment

## Weil-McLain hybrid systems pay off in the long run

Weil-McLain features an extensive line of standard efficiency and high-efficiency boilers, all top-rated for reliability, durability and energy-efficient performance. This allows building owners and contractors to mix and match to create the ideal hybrid configuration for their application. And our high-efficiency units, including the SlimFit®, feature advanced "smart" controls to simplify set-up, operation and maintenance.

## Where hybrid systems fit best

Weil-McLain hybrid boiler systems are the best solution for existing commercial buildings such as medical facilities, apartment complexes, churches, schools, nursing homes and corporate campuses.

### Consider a hybrid boiler system for:

- A building with a working standard efficiency boiler system looking to improve efficiency by adding a high-efficiency component
- A building with 2 standard efficiency boilers, where one is failing and can be replaced with a high-efficiency boiler, creating a hybrid boiler system
- A total replacement situation - installing a hybrid system is cheaper to purchase upfront and often achieves up to 80% of the energy savings of replacing an entire boiler plant with high efficiency condensing boilers

## Start with a discussion about your specific building

Weil-McLain representatives are boiler experts. Contact us to find out if a Weil-McLain hybrid boiler system is right for your existing commercial building.

## The Weil-McLain advantage:

### Versatility:

Broad array of condensing and cast iron boilers to fit any application

### Lower upfront costs:

Existing heating systems (air handlers, heating coils, radiators, etc.) can remain in place with no modification

### Longer-lasting boiler plant:

Hybrid system adds life to boiler systems by matching year-round heating capacity

### Better ROI:

Enhances financial value and rate of return for many existing buildings

### Energy efficiency rebates:

Available on select high efficiency condensing boilers

### State-of-the art controls:

Deliver advanced automatic sequencing

**Weil-McLain** is a leading North American designer and manufacturer of hydronic comfort heating systems for residential, commercial and institutional buildings since 1881. Weil-McLain has manufacturing facilities in Michigan City, Indiana and Eden, North Carolina, along with regional sales offices throughout the United States and an administrative office in Burr Ridge, Illinois. Building on a reputation of quality and innovation, Weil-McLain is committed to creating Simplified Solutions for our Complex World™.

**SIMPLIFIED SOLUTIONS FOR OUR COMPLEX WORLD™**
