

Burner specifications and data

Webster burners

Model **WJB** *Flame retention type, for gas, light oil or combination gas/oil firing*

WJB Standard Arrangement

Inverted Arrangement (Optional)

Dimensions (inches)

Burner model	A	B1	B2	C1	C2	D	E	F**	G	H1***	H2***	L1*	L2	W***	X**
WJB1	4	18-3/8	18-3/8	8-1/4	14-3/8	7-1/4	11-7/16	18-15/16	5	15-11/16	11-3/8	26-5/8	36-15/16	21-7/8	13-3/4
WJB2	4	19-1/16	18-1/2	9-1/2	14	9-1/8	17-3/4	20	6-5/8	19	12-1/8	28-5/8	39-1/4	30-11/16	24-1/4
WJB3	4	19-15/16	19-9/16	15-5/16	19-1/4	11-1/4	23-1/4	26-15/16	8-5/16	22-1/2	14-3/4	38-1/4	48	36-3/4	29-1/2

* Add 1/4 " to Dimension L1 for heavy oil burners. Use Dimension L2 for alternate control cabinet location.
 ** On units with FGR for NOx reduction, FGR valve will emerge from side of burner opposite blower motor.
 *** Extra ground clearance & width may be required for the addition of FGR. Consult factory for details.

Notes

- Burner capacities listed for elevations up to 1,000 feet. For higher elevations, consult local Weil-McLain distributor/agent or sales office.
- Light oil ratings based on No. 2 fuel oil with heating value of 140,000 Btu per gallon.
- Gas ratings based on natural gas with heating value of 1,000 Btu per cubic foot and specific gravity of 0.60. Gas burners for other gases are available. Consult local Weil-McLain distributor/agent or sales office.
- Boiler-burner unit to be adjusted to achieve +0.10 inches W.C. pressure at the flue collar, resulting in positive pressure in firebox as listed.
- Minimum gas pressures listed are subject to variations due to job conditions. Gas burners for other gas pressures are available. Consult local Weil-McLain distributor/agent or sales office.
- Manifold pressures and combustion air settings shown are for initial start-up. Final pressure and air settings should be determined after checking actual gas flow and combustion readings.
- Gas Control Systems:
 - LHO: On-off operation, low fire start, high fire run. 894-1894 – two-position air controlled by damper arm on motorized gas valve, fixed damper pre-purge. 1494-1894 – two-position air controlled by separate motor, open damper pre-purge.
 - LHL: Low-high-low-off firing conditions. 894-1894 – two-position air controlled by damper arm on motorized gas valve, fixed damper pre-purge. 1494-1894 – two-position air controlled by separate motor, open damper pre-purge.
 - MOD: On-off operation, with proven low fire start and full modulating firing conditions with combustion air control. Proportional motor drives fuel metering valve and combustion air damper according to the firing conditions. Open damper pre-purge.

Notes

8 Light Oil Control Systems:

LHO: On-off operation, low fire start, high fire run. Two-position air, two-position oil. Fixed damper pre-purge on 894-1194, open damper pre-purge on 1294-1894.

LHL: Low-high-low-off firing conditions. Two-position air, two-position oil. Fixed damper pre-purge on 894-1194, open damper pre-purge on 1294-1894.

MOD: On-off operation, with proven low fire start and full modulating firing conditions. Proportional motor drives fuel metering valve and combustion air damper according to the firing conditions. Open damper pre-purge.

9 Gas/Light Oil Control Systems:

LHO/LHO: Combines gas and light oil characteristics listed above.

LHL/LHL: Combines gas and light oil characteristics listed above.

MOD/MOD: Combines gas and light oil characteristics listed above.

10 120/60/1 control circuit is used for all burners.

11 Control circuit transformer is available as an option.

12 Motor starter or contactor will be furnished for all burners.

13 Combustion Controls:

- R7284P combustion control uses cadmium cell for flame detector to monitor oil burner flame, also furnishes intermittent ignition.
- RM7897 flame safeguard control uses ultraviolet electronic flame detector to monitor gas or oil burner flame and provides pre-purge programming. "A" models provide intermittent pilot; "C" models provide interrupted pilot and RUN/TEST switch.
- RM7840L, E110/EPD170 flame safeguard control monitors the oil or gas burner flame, provides pre-purge and post-purge programming, provides switching necessary to allow firing rate motor to be driven to both low fire and high fire positions, prevents start-up if pre-ignition interlocks are open and has low fire start proving circuit. In the event pre-ignition interlock circuit or running interlock circuit does not "prove", system will lock out on safety. Control is standard equipment with IRI – modulating (proven low fire start) system. Ultraviolet sensitive electronic flame detector is standard with infrared detector available.
- RM7800L, E110/EP170 flame safeguard control monitors the oil or gas burner flame with digital readout control system, provides pre-purge and post-purge programming, provides switching necessary to allow firing rate motor to be driven to both low fire and high fire position, prevents start-up if pre-ignition interlocks are open and has low fire start proving circuit. In the event pre-ignition interlock circuit or running interlock circuit does not "prove", system will lock out on safety. Ultraviolet sensitive electronic flame detector is standard with infrared detector available.

Notes

- 14 Airflow safety switch is standard for all gas and combination gas/light oil units.
- 15 Burners will be completely assembled and wired (except gas train) and factory test-fired.
- 16 Burners listed by Underwriters Laboratories, Inc., state of Connecticut, Fire Marshal state of Massachusetts, city of New York MEA, and others.
- 17 Boiler-burner unit to be adjusted to achieve +0.10 inches W.C. pressure at the flue collar, resulting in positive pressure in firebox as listed.
- 18 Direct spark ignition is standard on light oil units 894-1794. Electric-gas pilot is standard on gas and combination gas/light oil units and on light oil units 1894-2594. Direct spark ignition is optional on combination gas/light oil units. Consult your local Weil-McLain distributor/agent or sales office.
