¹ Shipped as Natural gas, field convertible to LP with optional kit. ² Based on standard test procedures prescribed by the United States Department of Energy, MBH refers to thousands of Btu per hour. ³ Net AHRI ratings are based on net installed radiation of sufficient quantity for the requirement of the building and nothing needs to be added for normal piping and pick-up. Ratings are based on piping and pick-up allowance of 1.15. An additional allowance should be made for unusual piping and pick-up loads. In the interest of continual improvement in product and performance, Weil-McLain reserves the right to change specifications without notice.
