

A CP number is Weil-McLain's serial number. This is a necessary identifier that allows Weil-McLain to accurately identify the boiler model, series, size, and age of your existing unit. A CP number appears on a white barcode sticker with the letters "CP" followed by 7 numerical digits. The CP number is also used when registering your boiler.

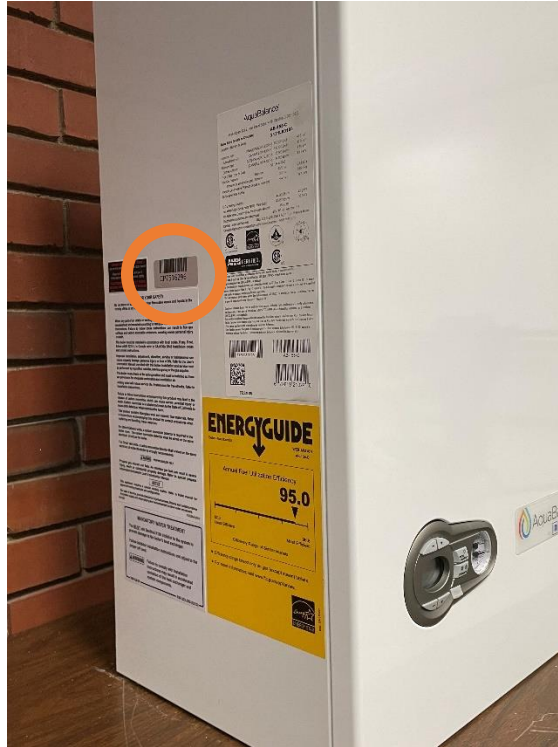

The serial number is in different locations by boiler model. Use the following images to help you identify where your CP# may be located on your boiler model.
