

220 Size Evergreen Boiler – “Natural Gas Only” Version to Start Short Term Production in December

Dear Weil-McLain Distributors,

Due to a burner supplier issue, Weil-McLain is in the process of testing and qualifying a new version of the burner on the **Evergreen 220** MBH input boiler, so it can operate on Propane Gas (LP). This issue does not affect any other Evergreen boiler size, nor does it affect the Evergreen 220 size boiler for “Natural Gas Only” applications.

During this short period of Propane Gas testing/qualification, we will start producing Evergreen 220 size boilers that can operate on Natural Gas Only (equipped with the new version of the burner). Production will start in December and is estimated to end in February, when the Propane qualification is in place. A beginning and ending CP number will be provided in a future communication, when known.

The Evergreen 220 size boiler part number **(383-900-000)** will *not* change during this short production period; but the physical units will have **special markings** on them that identify they are for Natural Gas *Only*, and *cannot* be converted to Propane Gas.

Markings include:

- Shipping Carton – text added on the traditional shipping carton label, AND an additional orange warning label next to the traditional shipping carton label (on all 4 sides of shipping carton)
- Inside Boiler Cabinet – a hang tag next to the gas components
- With Boiler Manual – a Notice flyer packed in a clear pouch

This bulletin is also to inform you that we have enough of the existing burners to cover orders already received by Weil-McLain (for an Evergreen 220 boiler that is capable to convert to Propane Gas). However, we will fill any new incoming orders with an Evergreen 220 boiler that can operate on Natural Gas Only (that cannot be converted to Propane Gas). Please be aware that if you need to order a 220 MBH input size boiler that can operate on Propane Gas during this short period of time, we have alternate options listed below.

Alternatives

Weil-McLain has a selection of product alternatives that can convert to Propane Gas, which include:

- ECO Tec 199, Part # 383900156 - Our new ECO Tec boiler line has a 199 MBH input size (the LP kit is an optional item, part # 510811417).
- Ultra 230, Part # 383500736 - Our versatile Ultra line includes a 230 MBH input size, the LP kit is included with the boiler.
- Evergreen 299, Part # 383900001 - If you wish to stay within the Evergreen family, our 299 MBH input size automatically modulates down to match any

heating demand (the LP kit is an optional item, part # 540202841).

Thank you in advance for your understanding, that product must continue to be produced during this period to meet the vast need of our shared customers.
