High Trim Design Features

Weil-McLain High Trim Baseboard, designed with high output heating elements incorporated into a compact enclosure, is ideal for environments where heat loss is high or wall space is limited.

The neutral colored enclosure has a baked-on enamel finish that resists scuffs, dents and scratches and can be painted or stained to match woodwork, walls, or existing décor for a custom-designed appearance.

(1) Front & Back Panels

The front and back panels, manufactured with unmatched precision, have gently sloping folds that increase rigidity and add additional support to resist bending and damage that may occur with kids, pets and life's everyday challenges.

(2) Damper

The sturdy damper control allows for fast and easy "one finger touch" temperature control so that every room is comfortable.

(3) Element

The elements are manufactured with more fins per linear foot and a larger fin size to ensure higher outputs with less energy consumption. And the durable, full-collared corrugated aluminum material will provide years of worry-free operation.

(4) Element Brackets

The factory-installed back panel brackets have an integrated return tube hanger that significantly reduces installation time and ensures a well-fitting, attractive baseboard.

High Trim Accessories

All High Trim accessories match the clean lines of the enclosure. Accessories may be installed either before or after the enclosure is mounted and piping completed. End caps are available plain or hinged to permit easy access to vents and valves. The 7" & 12" filler sleeves may be used in place of the end cap to fill out a wall. One-piece corner accessories – outside, inside, and bay – make installation easier and enhance the appearance of the finished installation. The one-piece splice plate covers joints and permits independent operation of dampers.

High Trim Design Advantages

Front and Back Panels

- Durable 18 gauge steel for maximum strength
- Snap-on design for easy installation and simple removal for cleaning
- Available in lengths from 2 to 8 feet
- Broad range of finishing accessories that reduce on-the-job cutting and offer a professional, clean appearance

Damper

- Unique pivot design for easy “one finger touch” operation
- Multi-position capabilities to provide maximum comfort in every room
- Easily detachable from the element brackets for cleaning
- Color-coordinated for an attractive, clean line appearance

Element

- Includes $\frac{3}{4}$ ” copper tube for maximum heat transfer
- Element tubes are flared at one end, eliminating the need for couplings when joining two lengths
- Fully collared corrugated aluminum fins are permanently bonded for safe, easy handling

Element Brackets

- Plastic glides provide a snug fit and reduced expansion noises
- Return tube hanger built into the top arm for precise placement

High Trim Specifications

Ratings

Water Flow Rate in GPM	Single Element High Trim - Model HT 3/4" - Average Water Temperature (°F)											
	110°F	120°F	130°F	140°F	150°F	160°F	170°F	180°F	190°F	200°F	210°F	220°F
1	195*	260*	330*	400*	480	560	640	720	800	880	960	1040
4	210*	280*	350*	430*	510	590	680	760	850	930	1020	1100

*Ratings at 140°F and lower temperatures determined by multiplying 150°F rating by the applicable factor specified in Table E in the I=B=R Testing and Rating Standard for Baseboard radiation.

Low Temperature Heating:

- Using low water temperatures improves operation efficiency.
- It may also improve comfort in over-sized systems.

Take advantage of these benefits by matching with a Weil-McLain high efficiency condensing boiler.

High Trim Model HT Water Ratings

Capacities in BTU/Hr. per Linear Foot with 65°F Entering Air

Notes:

Pressure drop is 0.047" of water per lineal foot at a 1 GPM flow rate, and 0.525" at a 4 GPM flow rate. Flow rates exceeding 6 GPM may result in system noise.
