

WEIL-McLAIN®

MARKETING BULLETIN

BULLETIN NO: MB-1404

DATE: February 11, 2014

PAGE: 1 of 1

TO: Weil-McLain Distributors
FROM: **Dan Neumann**, Director of Sales and Marketing Support
SUBJECT: **BIM-Revit files are here!**

We introduced our BIM-Revit files publicly to hundreds of industry professionals at the AHRI Expo in New York City last month. One of the capabilities on display was our ability to provide Revit files to designers (consulting engineers, design/build firms, et al). This was all made possible due to the collaboration of engineering, supply chain, and marketing personnel within Weil-McLain. These files are now available for various products commonly used in commercial projects:

- SlimFit high efficiency condensing boiler
- Ultra Commercial high efficiency condensing boiler
- 80, 88, and LGB Series cast iron sectional boilers
- Ultra residential high efficiency condensing boiler
- Aqua Plus Tanks

By using specific software, Architects, Engineers, Designers and Contractors will have the ability to add our products to the overall building design in 3-D modeling from concept to construction. The advantage of using this software is also getting the right Weil-McLain products specified for the project by using BIM-Revit files.

Files are available for download from the specific product page on our website www.weil-mclain.com or visit Autodesk Seek's site [here](#) for the entire library of files.

For any questions on using and accessing BIM-Revit files, please contact your Weil-McLain Sales Representative.
